

# Expenses chart component

Your challenge is to build out this single-page portfolio and get it looking as close to the design as possible.

We provide the data for the chart in a local `data.json` file. So you can use that to add the bars dynamically if you choose.

Your users should be able to:

- View the bar chart and hover over the individual bars to see the correct amounts for each day
- See the current day's bar highlighted in a different colour to the other bars
- View the optimal layout for the content depending on their device's screen size
- See hover states for all interactive elements on the page
- **Bonus:** See dynamically generated bars based on the data provided in the local JSON file
